AttendanceTRKR

## Capture Workforce Attendance Anytime … Anywhere.

A companion to Workforce Management PLUS or CourtNotify, AttendanceTRKR is used on any type of web-based device to track personnel check-in and check-out times regardless of location. It comes with options to collect information as needed based upon the location and the type of check-in and check-out is requested.

With AttendanceTRKR agency policies rules can be applied that ensure personnel are not checking into events too early or remaining at events too late. When used with the Orion Mobile App, geographical location data can be applied to ensure that check-in/check-out times are within proximity of each scheduled event's location. What's more, it includes options for the scanning of employee badges or the use of biometric identification rather than entering usernames and pin data. Saved attendance data are reported and can be submitted electronically to interfaced systems.

From court attendance to academy training, or on-call rapid-response … AttendanceTRKR is a cost-effective means of capturing and reporting attendance times and event results.

Valuable Results

- » Cost-effective means of tracking attendance
- » Ensures compliance with agency policies
- » Insightful usage of attendance data for analytical reporting and audits

- » Access using any Internet-connected device
- » Check-in and check-out name, date, time stamps
- » Check-in for events individually or as a group
- » View event details and notification documents
- » Enter event results upon check-out
- » Apply agency check-in/out restriction rules
- » Apply geographical location rules if mobile devices preferred for check-in and check-out
- » Track personnel failing to appear / view reasons
- » Generate analytical reports of attendance times and event results
- » Scan employee badge or use biometric IDs
- » Role-based security permissions
