

AttendanceTRKR

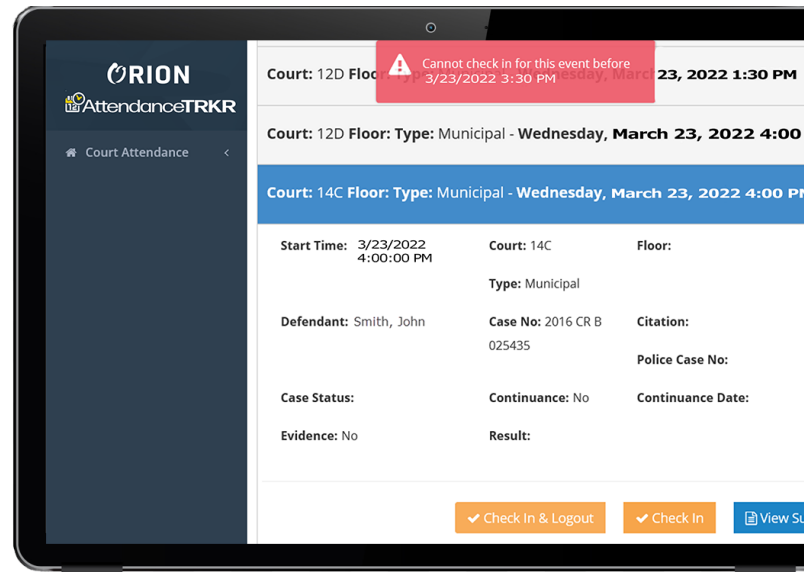

Real-Time Court Attendance and Results Tracking

A companion to CourtNotify, AttendanceTRKR is used on any type of web-based device to track personnel check-in and check-out times regardless of courthouse location. It comes with options to collect information as needed based upon the location and the type of check-in and check-out is requested.

With AttendanceTRKR agency policies rules can be applied that ensure personnel are not checking into court events too early or remaining too late. When used with the our Mobile App, geographical location data can be applied to ensure that check-in/check-out times are within proximity of each scheduled event's location. What's more, it includes options for scanning employee badges or the use of biometric identification rather than entering usernames and pin data. Saved attendance data is reported and can be submitted electronically to interfaced systems.

Valuable Results

- » Cost-effective means of tracking officer court attendance
- » Ensures compliance with agency policies
- » Save administration time for Court Liaisons
- » Insightful usage of attendance data for analytical reporting and audits

- » Access using any Internet-connected device
- » Check-in and check-out name, date, time stamps
- » Check-in for events individually or as a group
- » View event details and notification documents
- » Enter event results upon check-out
- » Apply agency check-in/out restriction rules
- » Apply geographical location rules if mobile devices preferred for check-in and check-out
- » Track personnel failing to appear / view reasons
- » Generate analytical reports of attendance times and event results
- » Scan employee badge or use biometric IDs
- » Role-based security permissions
