interactive ANALYTICS

Have a Conversation with Your Data.

Interactive Analytics is a companion solution to *Workforce Management PLUS* and/or *CourtNotify* that enables the utilization of data within these systems (or data received from other platforms like CAD, RMS or CMS) to generate reports, charts, and dashboards.

▶ Analytize Data from Your Point-of-View

Going beyond widget dashboards, *Interactive Analytics* empowers business users to interrogate the data that is important to them and generate analytics based on their viewpoint. Using the solution's analysis tools, users can easily sort, group and filter their data before viewing it in tables, charts or other types of visualizations. Visual galleries can then be used to create self-service dashboards and reports.

Benefits

- Generate visualizations with no technical expertise
- Interact with data based on specific viewpoints
- Eliminate need for proprietary data storage or separate infrastructure
- Save time generating and distributing ongoing reports

▶ Schedule What, When, and for Whom to Share Your Analytics

With *Interactive Analytics*, users can easily generate and share intuitive self-service reports, charts and dashboards. Ongoing delivery of analytical reports and visualizations can be scheduled for specific personnel or groups. From spotting workforce trends to discovering problematic causes of specific types of activities, self-service analytics help leaders make data-driven decisions

▶ The Missing Link for Justifications and Data-Driven Management

Discover patterns in workforce activities and the associated costs, such as:

- » Grant-funded activities
- » Trends for future planning
- » CAD incident response times
- » Certification renewals
- » Causes of excessive overtime
- » Status of regulatory reporting
- » Firearms usage and renewals
- » Unplanned absentee sources
