SaaS Subpoena Software for Officer and Civilian Witnesses
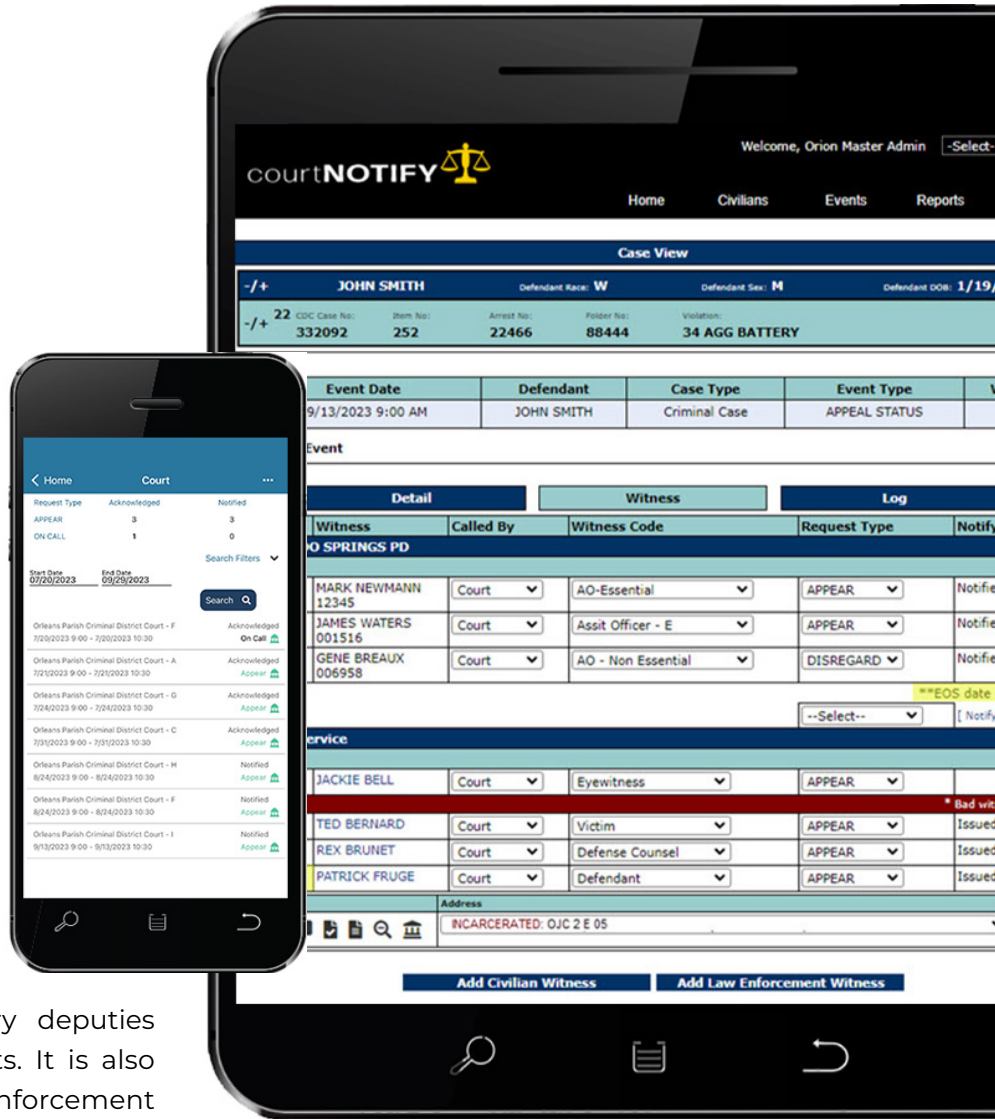

> Managing subpoenas using manual processes is labor-intense and prone to gaps that can result in hearing delays and unnecessary cost. And email notifications fail to track the subpoena process as part of each case's life cycle. Enter CourtNotify.

CourtNotify is SaaS software used by agencies coast to coast to increase court notification efficiencies, improve witness accountability and reduce court administrative costs. It adds value to existing case management systems by transmitting real-time subpoenas and court-related notifications to officers and/or civilian service delivery deputies that includes receipt acknowledgments. It is also used as a stand-alone system by law enforcement agencies to manage their officer's subpoenas, with case details either data entered or imported from judicial systems.

With CourtNotify, administrators add witnesses to case events and can transmit subpoenas to multiple agencies. Officer's schedules can be viewed and those with conflicts are flagged.

Officers receive their notifications via their CourtNotify account, agency email, or using IOS or Android mobile devices. Acknowledgment links enable quick time/date stamped receipt verification.

Civilian service agencies receive subpoenas electronically and assign deliveries to service deputies. Witness's service and court history are tracked, with date/time stamped delivery logs.

Witnesses with bad addresses or alias names are flagged for improved service results. Delivery statuses are saved using bar code scanners or entered on mobile devices, with real-time results viewing online by all participating criminal justice practitioners.

courtNOTIFY

Highly Configurable

» Custom document formatting including images, seals, and electronic signatures

» Configure specific court types, locations, hearing codes, etc.

» Setup notification and acknowledgment types for civilians versus officers

» Role-based security controls for issuance and receiving agencies

CourtNotify can interface with existing scheduling systems or its scheduling and leave management tools can be used to coordinate schedules and court dates. When AttendanceTRKR is added to the solution, court attendance times with case results can be captured for auditing and statistical reporting.

Valuable Results for All Criminal Justice Practitioners

» Decreases court admin time and cost

» Reduces court delays and improves case closures

» Improves witness attendance and accountability

» Reduces OT cost for unnecessary officer appearances

» Saves time and cost of civilian service deliveries

Data Security

» Microsoft Azure Government Cloud infrastructure

» The infrastructure environment features FedRAMP architecture with the highest levels of data security, system uptime, and built-in redundancy

» BreachLock application certification
