

Interactive Analytics

Have a Conversation with Your Data.

Interactive Analytics is a companion solution to Workforce Management PLUS and/or CourtNotify that enables the utilization of its data (or data received from other platforms like HRIS, Payroll, CAD, RMS, or CMS) to generate reports, charts, and dashboards.

Analyze Data from Your Point-of-View

Going beyond widget dashboards, *Interactive Analytics* empowers business users to interrogate the data that is important to them and generate analytics based on their viewpoint. Using the solution's analysis tools, users can easily sort, group, and filter their data before viewing it in tables, charts, or other types of visualizations. Visual galleries can then be used to create self-service dashboards and reports.

Schedule What, When, and for Whom to Share Your Analytics

With *Interactive Analytics*, users can easily generate and share intuitive self-service reports, charts, and dashboards. Ongoing delivery of analytical reports and visualizations can be scheduled for specific people or groups. From spotting workforce trends to discovering problematic causes of specific types of activities, self-service analytics help leaders make data-driven decisions

- » Generate visualizations with no technical expertise
- » Interact with data based on specific viewpoints
- » Save time generating and distributing ongoing reports
